Maverick Series Large Bore Steel Body Frac Plug

The Maverick Series Large Bore Steel Body Frac plug provides optimal operation efficiency by removing any need for coiled tubing intervention.

The MS Large Bore SB Frac plug's large diameter allows the user to put their well on production just after fracking operations are completed without milling out the plugs from the wellbore.

A unique MS Magnisium Ally frac Ball seats and seals on the upper portion of the plug. Next, the frac ball dissolves with standard 3% or 5% KCL frac fluids at a minimum of 150° Fahrenheit.
